

## ***Replacement UV lamps for Screen USA printers***

The majority of Screen USA printers utilize the Subzero line of UV lamps. Here the UV lamp is integrated into a cassette. In order to replace the UV lamp the entire reflector assembly must also be replaced. The theory is to provide a simple method of updating the UV dryer. Like any theory, it has its faults. The main detractor is cost. It is not uncommon to spend \$700.00 to replace the OEM cassette. Factor in that some machines incorporate two cassettes, the bill can be staggering. Rather than needlessly spending a lot of money, TCS Technologies has an alternative solution. We take your existing cassette, install a new TCS Technologies UV curing lamp, remove any ink deposits and polish the reflector. You will realize a 70% savings over the OEM product without sacrificing performance.

Our value added service eliminates guesswork and provides a turnkey approach for lamp replacement. We do all this for \$65.00 plus the price of the lamp. You save money and we take the guesswork out of the equation.

**We manufacture UV curing lamps for the following Screen USA printers:**

True Press 2500 UV	True Press Jet 2500UV	TP2500
--------------------	-----------------------	--------

**Replacement UV inkjet lamps for Screen USA printers include:**

<b>Subzero 055</b>	<b>Subzero 170</b>
--------------------	--------------------
